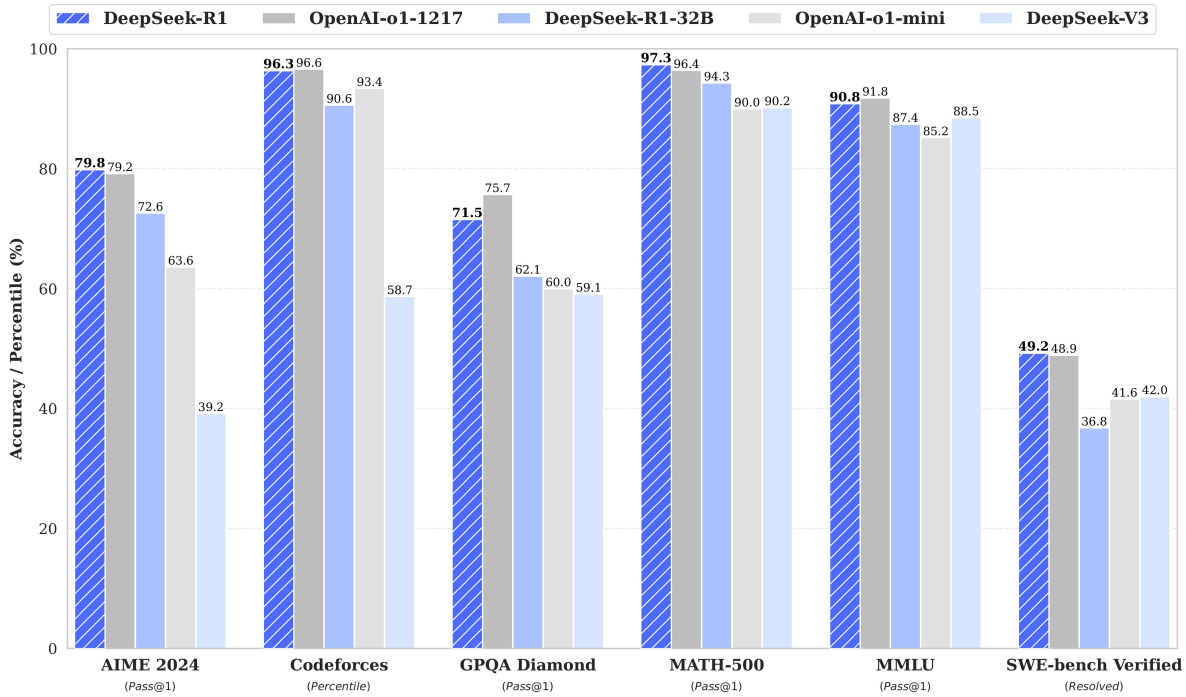
Development Board: Jetson AGX Orin series motherboard

DeepSeek-R1 is an open-source Large Language Model (LLM) designed by DeepSeek for understanding and generating code.

1. Model Size

Model	Size
deepseek-r1:1.5b	1.1GB
deepseek-r1:7b	4.7GB
deepseek-r1:8b	5.2GB

2. Performance

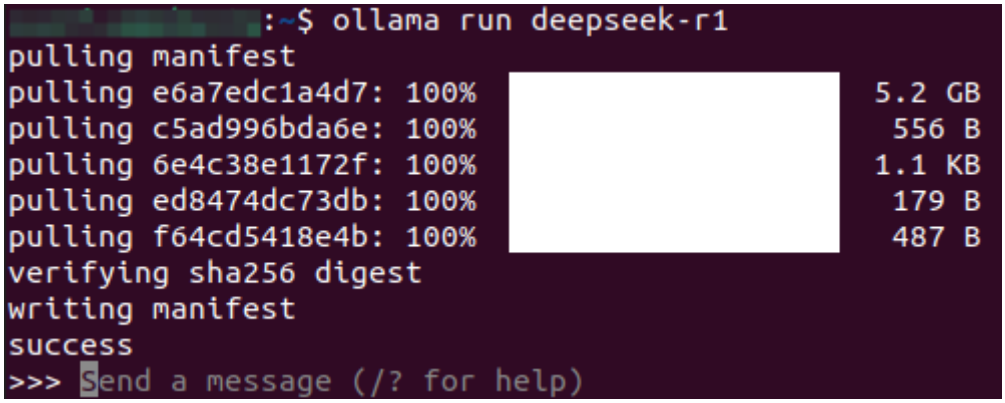


3. Using DeepSeek-R1

3.1 Running DeepSeek-R1

Use the run command to start running the R model. If the model is not downloaded, the model from the Ollama model library will be automatically downloaded:

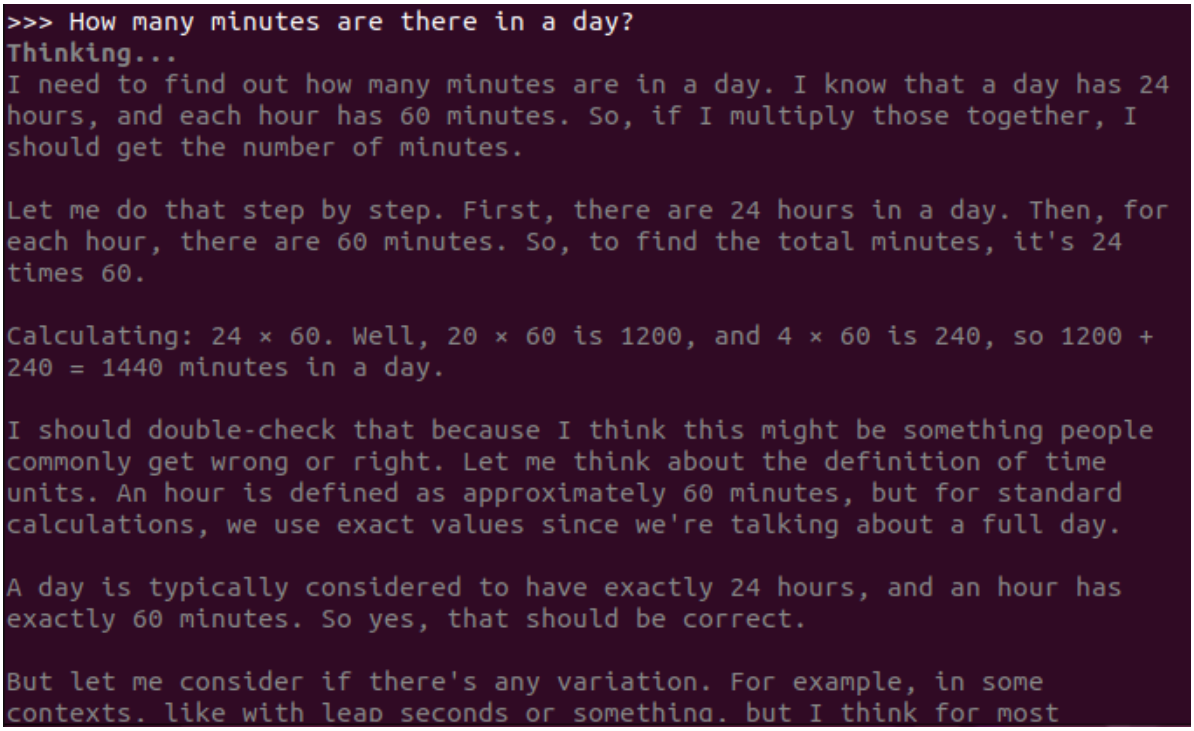
```
ollama run deepseek-r1
```



3.2 Starting a Conversation

```
How many minutes are there in a day?
```

Response time depends on your hardware configuration, so please be patient!



3.3 Ending the Conversation

Use the `Ctrl+d` shortcut or `/bye` to end the conversation!
