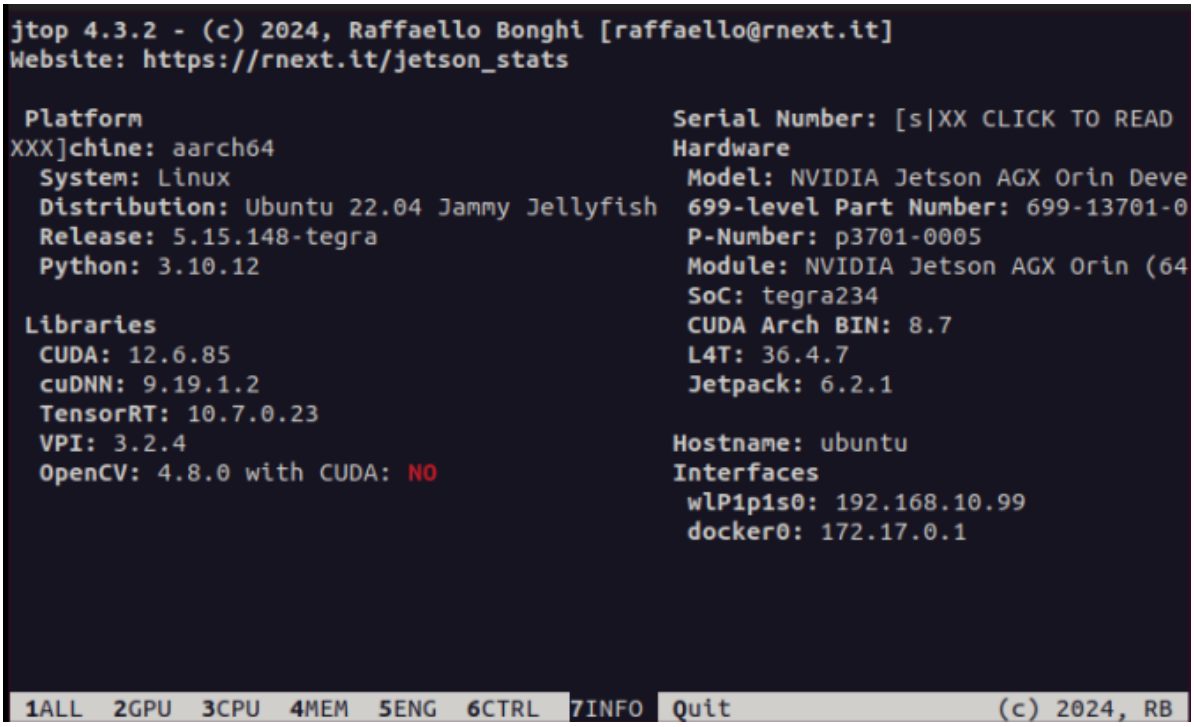
DeepStream Environment Setup

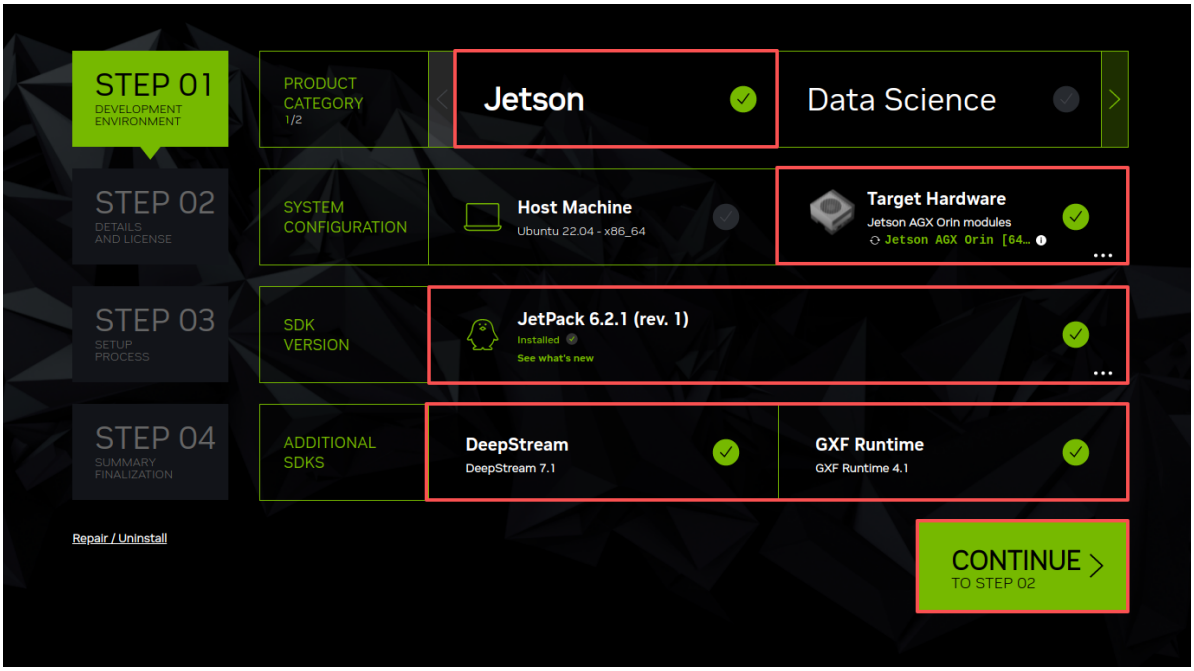
DeepStream Environment Setup
- 1. System Information
- 2. Installing DeepStream
- 3. Verifying Installation
  - Running the Example

1. System Information



2. Installing DeepStream

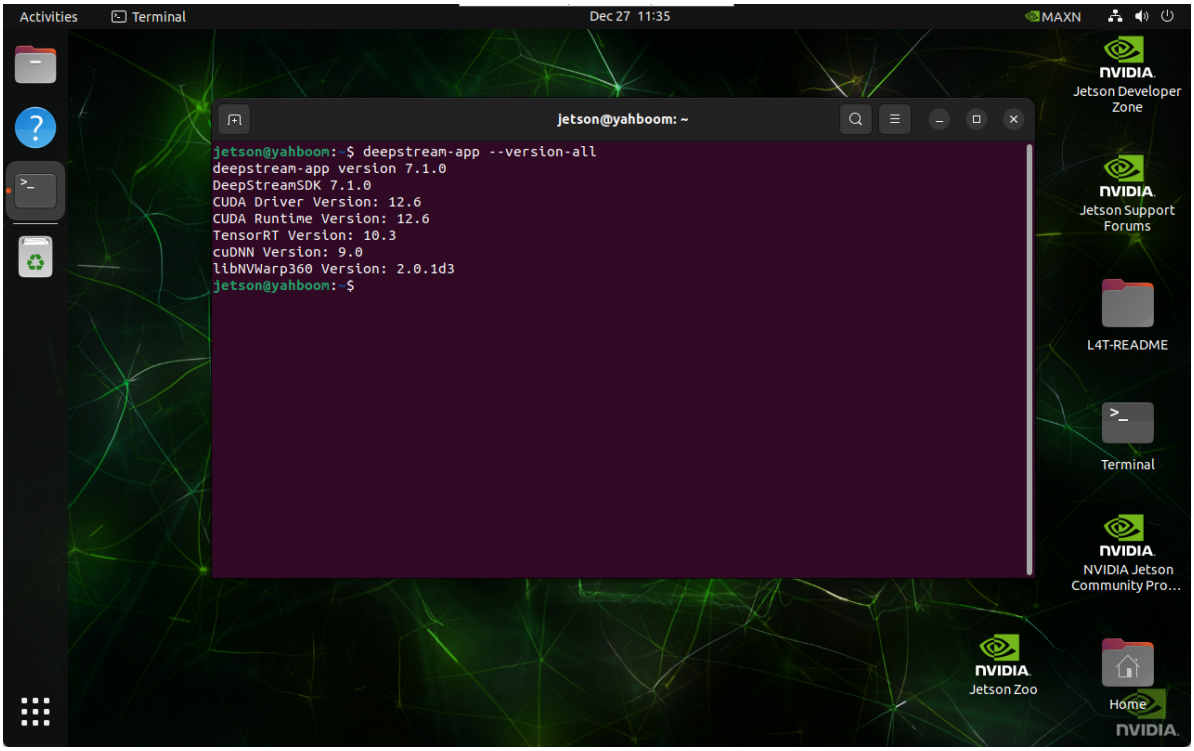
Refer to the tutorial [Jetson basic course: 04.Install Jetpack environment]: Select the DeepStream 7.1 option



3. Verifying Installation

```
sudo apt install libgstrtspserver-1.0-0
```

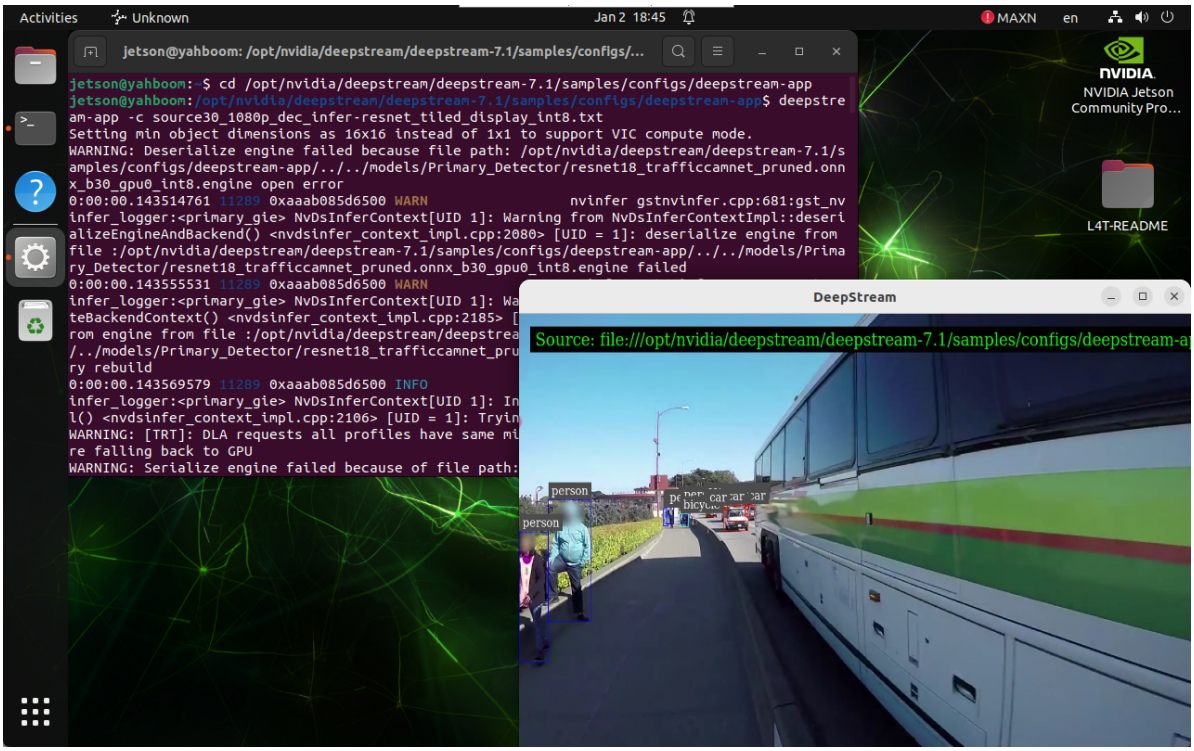
```
deepstream-app --version-all
```



Running the Example

```
cd /opt/nvidia/deepstream/deepstream-7.1/samples/configs/deepstream-app
```

```
deepstream-app -c source30_1080p_dec_infer-resnet_tiled_display_int8.txt
```

Note: Running this example may take a long time. If it does not terminate automatically, wait for the program to run!


The motherboard may display a "System throttled due to Over-current." message when running programs with high load, which is normal!
