1. GPIO Pin Diagram

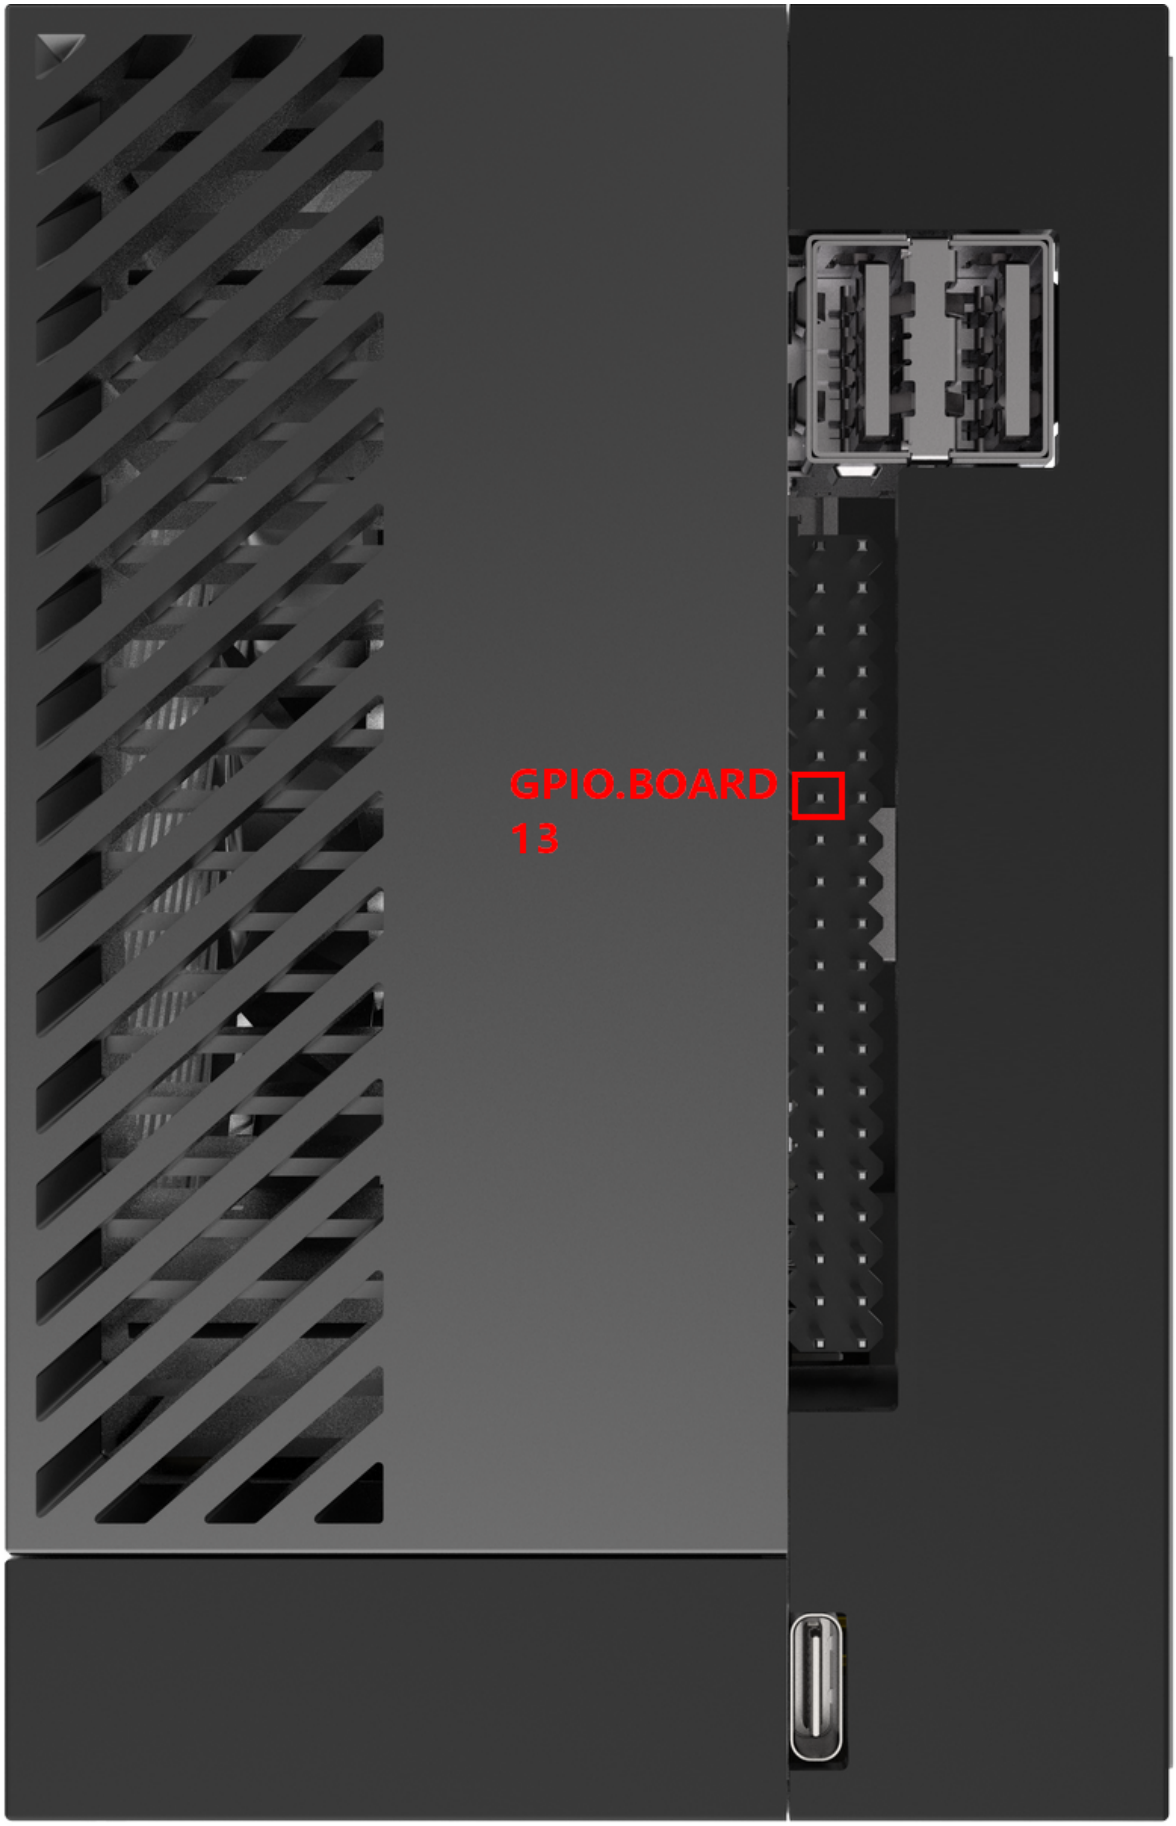
GPIO.BOARD pin 13 corresponds to GPIO.BCM pin 27:



2. Running the Program

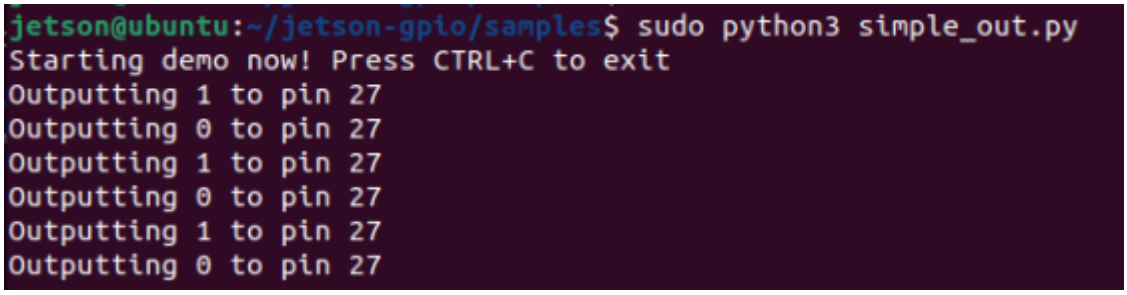
Currently, some GPIO output control functions are malfunctioning because some pin device trees are only configured with input functions by default, thus output cannot be enabled! **

```
cd ~/jetson-gpio/samples
```

```
export JETSON_MODEL_NAME=JETSON_AGX_ORIN
```

```
sudo python3 simple_out.py
```

3. Program Results

Using DuPont wires to bring out GPIO.BOARD 13 and GND pins, a multimeter can be used to measure the pin voltage changes:


Caution: Do not connect incorrectly or cause a short circuit. Errors may damage the motherboard hardware!
